

End User Control Panel Walk Through

Dashboard

User Statistics - Displays breakdown of user storage statistics.

- Storage Overview - Graphs core data stored, retention data, and remaining space left in the over all quota pool.
- Storage Statistics Breakdown by Day - As data and space change over time, this display chart will plot the change in data, retention and total space ratios on a monthly basis.
- Backup Sets Overview - This section summarizes the status of each separate backup set created under that particular user. The box area will show quota status, data, retention space statistics, the last run job, the time taken, the usage ratio, and total files backed-up in that set.

Profile - Edit the user profile, including a chosen password, descriptive name, timezone, and language, bandwidth limit, and contacts available for the account.

User Backup Sets - View all backup sets, and change section criteria such as a name, backup set type, network domain resources, backup set features, miscellaneous settings, offline backup, source, filters, schedule, retention, commands, local, delta, and tools.

User Reports - This is a graphical calendar view which will display all of your report data for backup events, and will correspond the color of either red, green, or yellow based on critical or errored backups, ok backups, and missed backups.

User File Explorer - Restore any file from any backup set within the selection. Use the file manager drill down to the desired file(s) or folder(s), and use the Online Restore button located to the top right of the window pane.

Downloads - Select all brandable software versions for download. Choose from either Windows, Mac, Linux or Novell according to license structure.
